

Using the driver in AutoCAD to create a plot file:

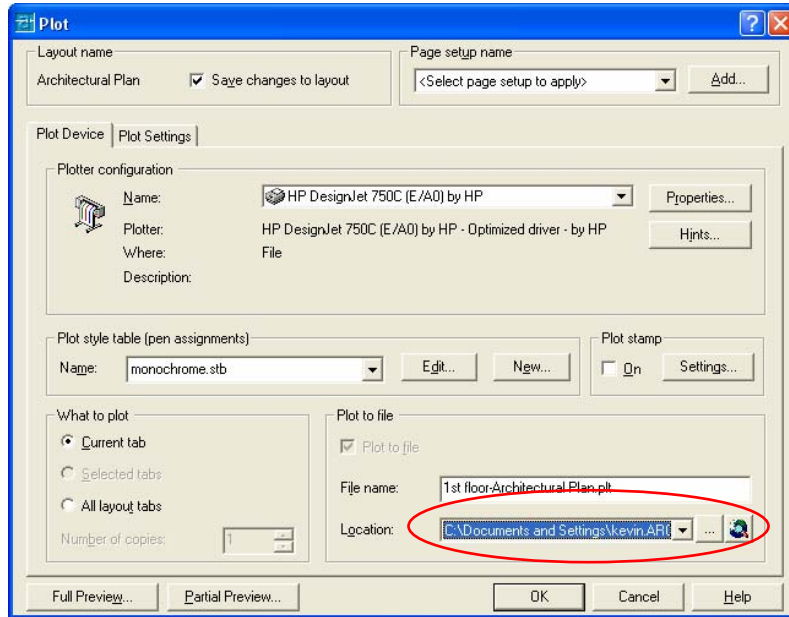

- 1) Open AutoCAD
- 2) Open the Drawing you wish to submit for plotting
- 3) Select File, Plot
- 4) Select the HP 750C from the plot dialog box (Plot Device Tab)

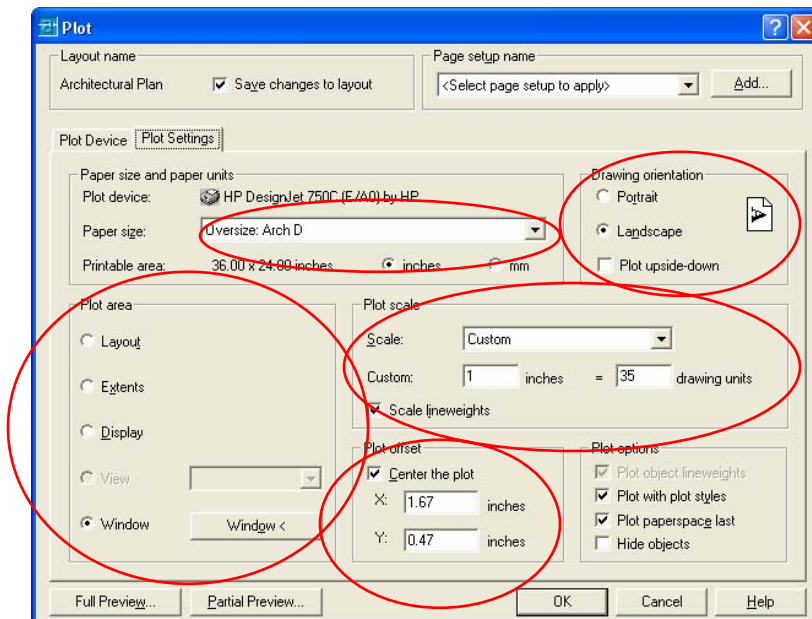

- 5) Set Plot style to monochrome for grayscale plotting:

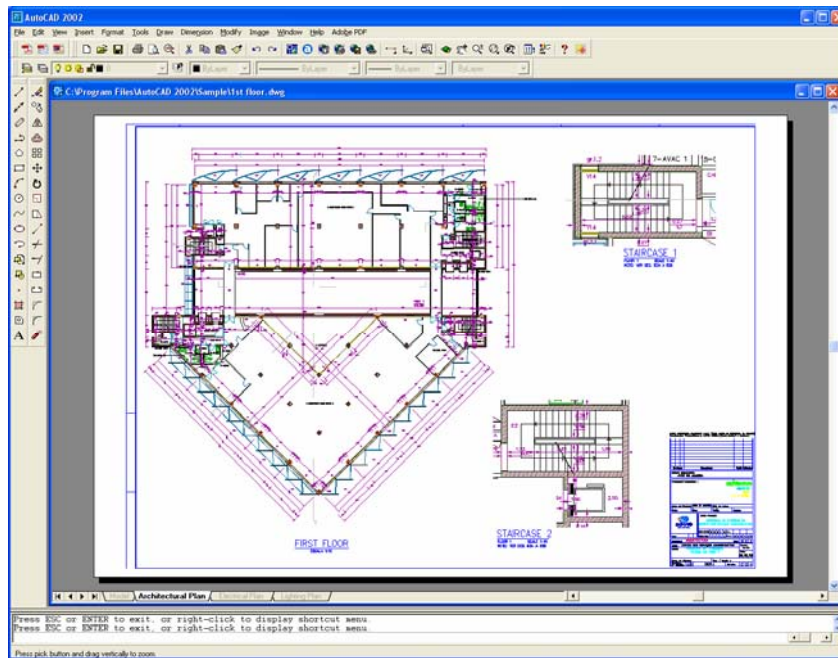

6) Select the location to send the plot file (Desktop is best)

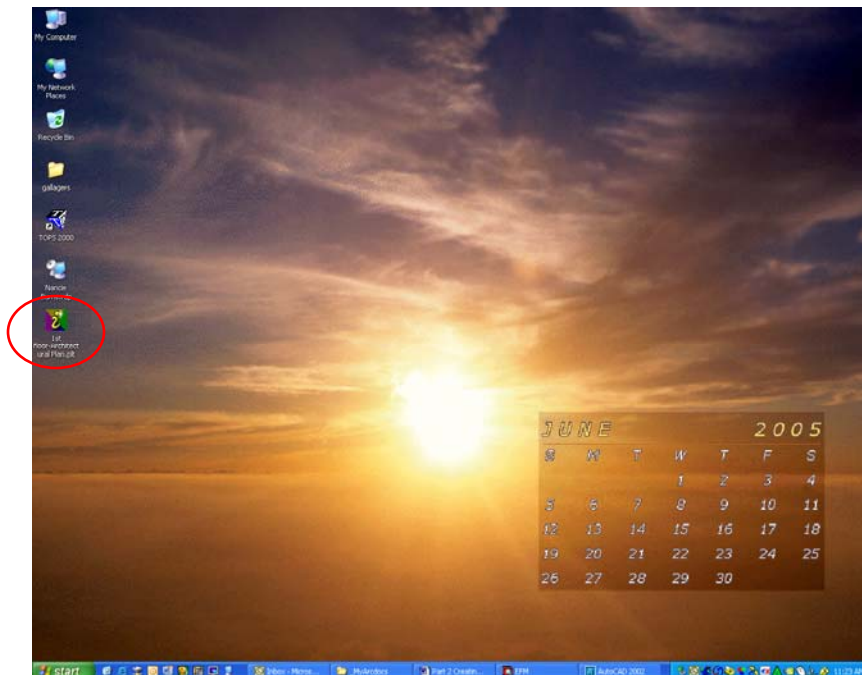

7) Select the Plot Setting Tab, select: Paper Size, Drawing Orientation, Plot Area, Plot Offset and Plot Scale

- 8) After making these selections do a FULL PREVIEW. This will display exactly how the drawing will plot.

- 9) Hit enter to return to plot dialog and click "OK". This will create a file with a .plt extension to the location you chose (Desktop?)

- 10) You may view this file by purchasing plot file viewer (<http://www.etecad.com/>)
- 11) Email this file to mail@arcpro.com (if less than 1000kb) or use our FTP site to upload larger files.
